

METHOD AND SYSTEM FOR VISUAL LINKER

ABSTRACT OF THE DISCLOSURE

5 The present invention provides a visual linker. The
visual linker includes a link server that implements
linking instructions for sections to a memory. The visual
linker also includes a graphical user interface that
receives said instructions and displays said sections
within said memory. The visual linker also includes an
10 application programming interface that receives said
instructions and reports the results of said linking
instruction and said sections within said memory. The
visual linker also includes an incomplete link comprising
sections not allocated to said memory. The visual linker
15 also includes a link recipe comprising said instructions
implemented by said link server.
